

Kendal

Background

Kendal is a 10-year-old child who has been in foster care since 2022. Kendal enjoys playing outside, swinging, drawing, and interacting with other people.

Behavioral History

Kendal has a language impairment and struggles to express herself. She can display aggression and experience outbursts at school. She has been diagnosed with Autism Spectrum Disorder, PTSD, intellectual disabilities, speech and sound disorder, developmental coordination disorder, enuresis, insomnia, and migraines.

Placement Needs

Kendal's adoptive family will need to be patient, understanding, and experienced in parenting children with varying abilities. Her ideal home would have no pets and no children or only older children.
