

Izak

Background

Izak is an outgoing and happy 10-year-old. He enjoys playing on his own but also enjoys sports like soccer and golf. He likes dogs, cats, and other animals and is extremely afraid of spiders. His other interests include cartoons, video games, LEGO bricks, Hot Wheels, Monopoly, and yarn crafts.

Behavioral History

Because Izak has experienced a lot of instability in his life, he has a strong fear of abandonment and values people who follow through on their promises. Izak has high hopes and can easily feel let down if his expectations aren't met.

Izak demonstrates some impulsive behaviors and may hyper-fixate on ideas, especially when playing alone. Izak is receiving professional support with these behaviors and is working on learning to get along with his peers. He continues to show improvement and is finding enjoyment playing with peers and being outside.

Izak has been diagnosed with Autism Spectrum Disorder (ASD), ADHD, Disruptive Mood Dysregulation Disorder, and Stressor Related Disorder.

Placement Needs

Izak is seeking a nurturing, patient family who values him and his input. He would prefer to be the only child but is open to living with older children. An ideal family for Izak would have a sense of adventure and a willingness to try new things.
